

● Measured on-axis region colored by core lobe diameter
 — QDHT model
 - - - 50% peak intensity
 ■ Measured 50% window

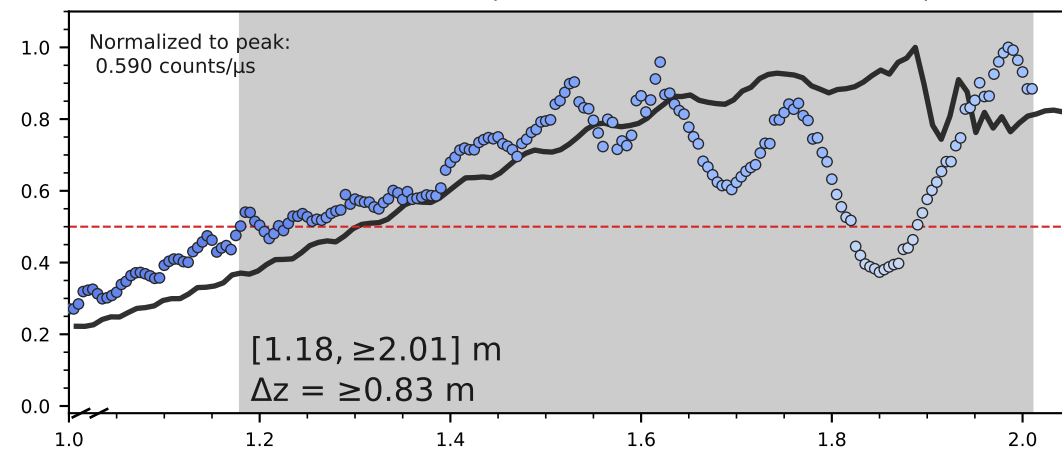

Candidate #1 (Jul 22-23)

mean core diam. = $126.4\ \mu\text{m}$ (+1.7% vs. ideal), FWHM = $59.2\ \mu\text{m}$

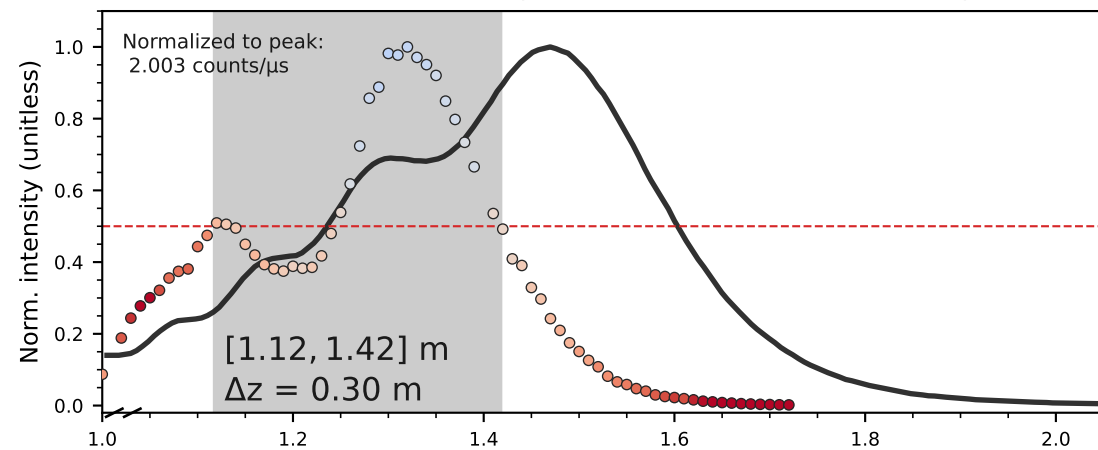

Candidate #2 (Jul 29-30)

mean core diam. = $118.2\ \mu\text{m}$ (-5.0% vs. ideal), FWHM = $55.4\ \mu\text{m}$

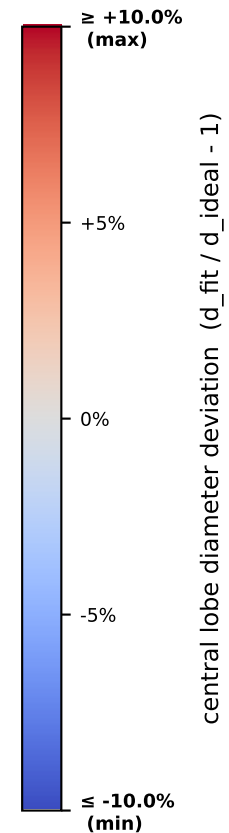

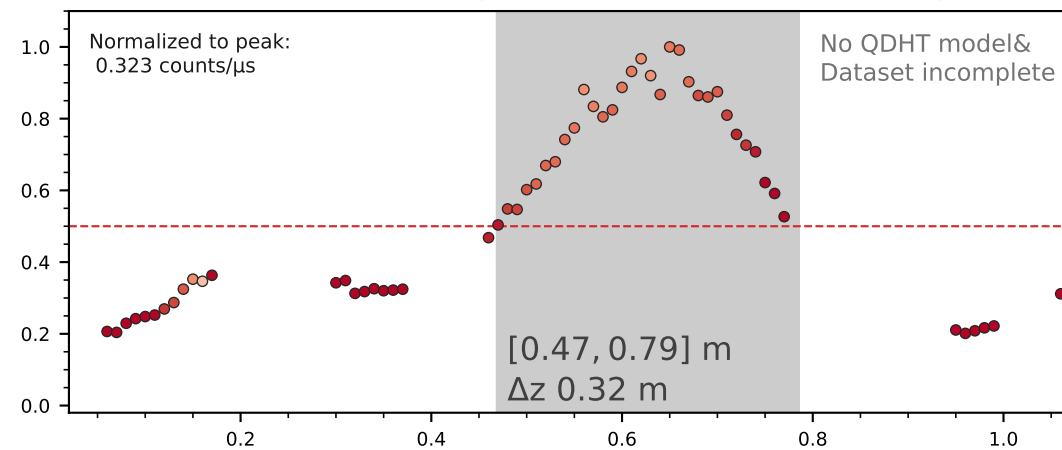

Candidate #3 (Aug 5-6)

mean core diam. = $125.0\ \mu\text{m}$ (+0.5% vs. ideal), FWHM = $58.5\ \mu\text{m}$

Candidate #4 (Aug 6)

mean core diam. = $268.1\ \mu\text{m}$ (+7.8% vs. ideal), FWHM = $125.6\ \mu\text{m}$

z = distance from last optical element (m)
